about our new signature

S·K WAYNE

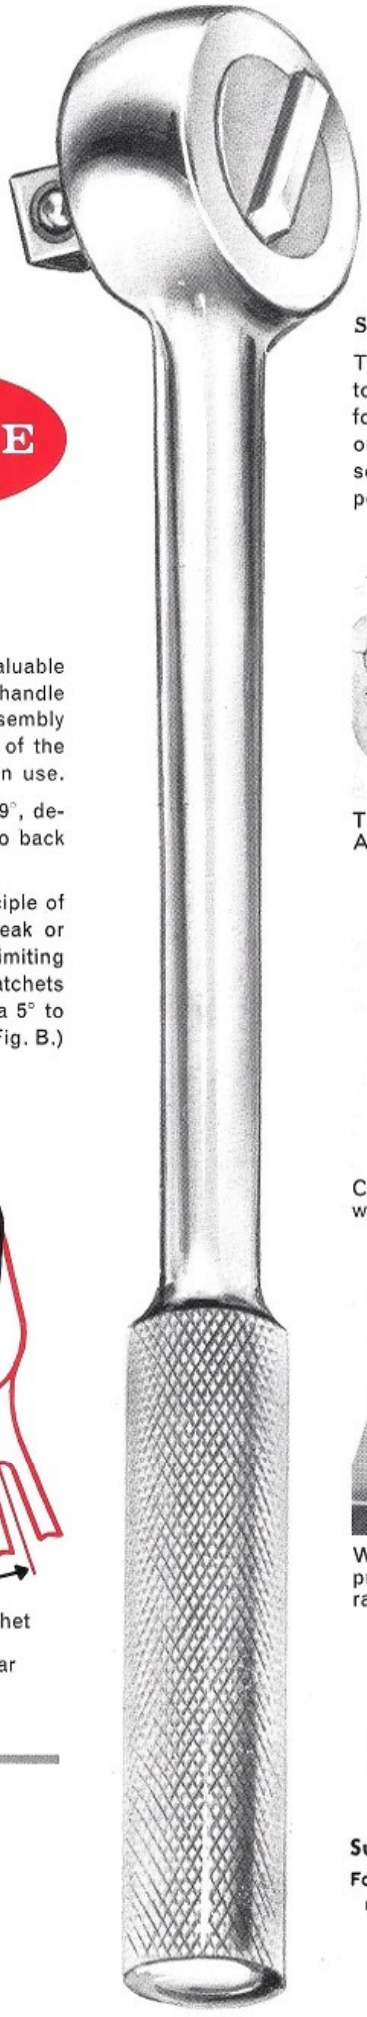
In going through this catalog, you have undoubtedly noticed the change in our name from S-K/Lectrolite to S-K Wayne. Also . . . the change from double diamonds to double ovals.

This new signature was created to identify ourselves as a subsidiary of Symington Wayne Corporation. The new mark will appear on all S-K/Lectrolite products, displays, advertising, etc.

It is important to realize, however, that this new signature implies no change other than name. As we say in our advertising, "Nothing has changed but our last name. Policy, quality and distribution remain the same."

the famous S-K ratchet

S·K WAYNE



EFFICIENT OPERATION

S-K Ratchets are positive, close-acting — an invaluable asset in tight work areas. Pressure on the handle forces the pawl, or dog, outward against the assembly housing to assure positive action. Three teeth of the pawl are engaged at all times while ratchet is in use.

S-K Ratchets operate in an arc of from 5.1° to 9°, depending on drive size, and have very little or no back movement. (See Fig. A.)

Conventional ratchets are designed on the principle of a shearing action. Because of tendency to break or shear off, teeth on the drive gear must be large, limiting the number of teeth and positions. Shear type ratchets generally operate in from 10° to 20°, and have a 5° to 10° back movement, decreasing efficiency. (See Fig. B.)

SIMPLIFIED MAINTENANCE

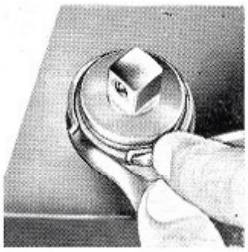
To increase the life of S-K Ratchets, it is advisable to periodically remove the operating mechanism, following simple steps illustrated below, and wash out accumulated grease and grit in a cleaning solvent. No lubrication is needed to assure proper performance.

TO REMOVE MECHANISM, place ratchet in neutral position.

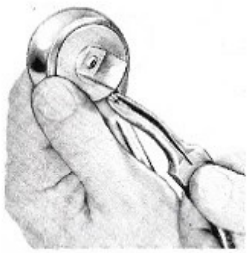
TO REPLACE MECHANISM, set it in neutral position.

Compress snap ring with screwdriver, thin or bent-nose plier.

Insert unit in handle, holding cap in place. Put snap ring in position.



With snap ring compressed, strike back of ratchet on solid surface.



Compress snap ring with thin or bent-nose plier and seat unit in handle.
